The XM Radio with their unique programming (including weather & traffice reports for different areas of the country) has been the best thing to happen in radio! As an over the road truckdriver, the ability to access local weather & traffic information, long before I enter an area, is so valuable to me. With this information long in advance of approaching an area, I can make safer & wiser choices as to how to proceed into that area. I just push one button on my xm radio and that info is there for me, clear and uninterrupted by commercials, so that I can keep my attention on the job of driving. I am not having to continuly search the radio dial, searching for the info I need, just to find that I have to wait until the next report or that the signal is fading in & out or loosing it all together. Also, You have to wait until you are in the middle of the situation before you can receive a clear radio station. By then, it is too late to avoid the area. I pay a monthly fee for my xm radio service & feel that if you allow the Assoc. of Broadcasters & the government to cause us to loose or restrict valuable programming, this will be a great disservice to the american public and the truckdriver in general who depend upon these features that xm radio offer!

Thank you so much..
